

PROOF-OF-SKILL PLATFORM - VERIFIED TALENT PASSPORT

PROBLEM STATEMENT

A resume primarily records what a candidate claims to know, but AI can now help produce highly polished resumes, portfolios, cover letters and interview preparation. This reduces the value of presentation quality alone as a reliable signal of real professional capability.

Develop a Proof-of-Skill Platform that verifies what a person can demonstrably do through realistic, role-based simulations and converts the evidence into a persistent Verified Talent Passport. The passport should combine proven skills with identity and employment verification so employers can evaluate capability rather than relying only on self-reported credentials.

CORE REQUIREMENTS

- Create practical simulations based on real workplace tasks instead of only multiple-choice tests.
- Evaluate technical, problem-solving, communication and role-specific capabilities using defined rubrics.
- Support role-specific challenges, such as diagnosing and redesigning a failing distributed application for a software architect.
- Allow AI tools during selected assessments when appropriate, while recording how the candidate used them.
- Verify candidate identity and maintain identity continuity during assessment activity.
- Generate evidence-backed skill levels or scores with supporting assessment artifacts.
- Combine verified skills, employment history and identity into a reusable talent passport.
- Support skill expiry, reassessment or recertification so the profile remains current.

EXPECTED OUTCOME

The prototype should allow a candidate to complete one or more realistic assessments and receive a structured professional capability profile such as: Identity → Verified Experience → Skill Evidence → Scores/Levels → Assessment History → Talent Passport.

DESIGN PRINCIPLE

The platform should make the underlying evidence visible and distinguish demonstrated ability from unverified claims. The goal is not to eliminate resumes, but to give employers a stronger, reusable signal of professional capability that can travel with the candidate across hiring processes.
